

CLINICAL NOTES

Dysplastic naevus.

MACROSCOPIC EXAMINATION

Left shoulder posterior: The specimen consists of a punch biopsy measuring 8 mm in diameter to a depth of 6 mm. On the skin surface is a pigmented macule measuring 4 x 4 mm. Trisected 1A.

MICROSCOPIC EXAMINATION

Left shoulder posterior: Section shows skin in which there is a lentiginous junctional naevus. This is associated with regression change and marked melanin incontinence within the superficial papillary dermis. There is no evidence of significant dysplasia or deep dermal regression. Excision margins appear clear of the lesion.

DIAGNOSIS:

LEFT SHOULDER POSTERIOR - HEAVILY PIGMENTED LENTIGINOUS JUNCTIONAL NAEVUS WITH REGRESSION. CLEAR OF MARGIN (PUNCH SPECIMEN).
