

CLINICAL NOTES

Exc MM + FTG

MACROSCOPIC EXAMINATION

Labelled left hand, nick 12 o'clock: An ovoid excision of skin measuring 32 x 25 x 5mm bearing a light tan patch measuring 20 x 15mm. Towards one short margin of the specimen there is an orientation nick present. This is placed towards 12 o'clock. The 3 o'clock margin is inked in black. Starting from the 12 o'clock margin and moving towards the 6 o'clock margin, 2LS and 2TS, 1A, 3TS, 1B, 2TS, 1C, 1TS and 2LS, 1D.

MICROSCOPIC EXAMINATION

Labelled left hand, nick 12 o'clock: Sections of skin with severe solar elastosis shows a central and peripheral cellular scar and residual IN SITU MELANOMA, CLARK LEVEL 1. There is no evidence of established regression or invasive malignancy. This lesion is 6 mm from the 3 and 9 o'clock margins, at least 8 mm from the 6 o'clock margin and > 10 mm from the 12 o'clock margin. There is a background of moderately dysplastic pigmented solar keratosis, pigmented seborrhoeic keratosis and solar lentigo. Central cellular scar appears clear of the peripheral and deep margins. Peripheral cellular scar extends to the 9 o'clock margin.

SUMMARY

LEFT HAND - IN SITU MELANOMA. CLARK LEVEL 1. PTIS (AJCC 8). NO ESTABLISHED REGRESSION. 6 MM FROM CLOSEST PERIPHERAL MARGINS.
