

CLINICAL NOTES

Excision biopsy - vectra screening programme decided it looked suspicious ?MM

MACROSCOPIC EXAMINATION

Labelled right groin: An ellipse of skin measuring 15 x 5 x 4mm bearing a dark tan papule measuring 9 x 5mm. 3TS.

MICROSCOPIC EXAMINATION

Labelled right groin: Sections show a predominantly intradermal benign lentiginous COMPOUND NAEVUS of superficial congenital type. There is patchy melanin incontinence in the superficial dermis in addition to a zone of old fibrosis consistent with previous trauma or regression. Minor lymphocytic inflammation is present. There is no evidence of dysplasia or malignancy. The excision appears complete.
