

Histology

HISTOPATHOLOGY REPORT

CASE NUMBER: H21/ 077046

MACROSCOPIC DESCRIPTION:

1. Vertex scalp: The specimen consists of a shave of skin measuring 7 x 5mm. A cream macule covers the majority of the surface. Bisected, blocked in toto 1A.
2. Left forearm: The specimen consists of a shave of skin measuring 6 x 5mm. A cream macule covers the majority of the surface. Bisected, blocked in toto 2A.
3. Dorsum nose: The specimen consists of a shave of skin measuring 3 x 3mm. A cream macule covers the majority of the surface. Blocked in toto 3A. AP

M ICROSCOPIC DESCRIPTION:

1. Vertex scalp: Sections show at least hyperkeratotic intraepidermal squamous cell carcinoma. The biopsy is quite superficial
2. Left forearm: Sections show a lichen planus-like keratosis (attempted immunologic regression of seborrhoeic keratosis, solar lentigo or similar epidermal lesion). There is no evidence of malignancy in the sections examined.
3. Dorsum nose: Sections show moderately dysplastic solar keratosis colonising a papillomatous seborrhoeic keratosis.

SUMMARY:

1. VERTEX SCALP, SHAVE BIOPSY:
-AT LEAST INTRAEPIDERMAL CARCINOMA
2. LEFT FOREARM, SHAVE BIOPSY:
-LICHEN PLANUS -LIKE KERATOSIS
3. DORSUM NOSE, SHAVE BIOPSY:
-MODERATELY DYSPLASTIC SOLAR KERATOSIS PLUS SEBORRHOEIC KERATOSIS
